

Exam Questions and Answers

- 1. Which of the following statements about the EventArgs class in C# is true? * a) EventArgs includes a static field Empty which represents an event with no state. * b) The event keyword is only used to define a method in a class. * c) All options are true. * d) Event is used only for events that have state.**
- 2. Different application domains can exist within the same process. * a) True * b) False**
- 3. Is a reference type that defines a method signature. * a) an event * b) home * c) delegate * d) design pattern**
- 4. Events in C# are based on the EventHandler and EventArgs base class. * a) True * b) False**
- 5. Is it legal to register the same channel that listens on the same port more than once? * a) True * b) False**
- 6. Any object outside the application domain of the caller application should be considered, where the object will be reconstructed. * a) Remote * b) Static * c) Serializable * d) local**
- 7. provides a repository where WSDL files can be hosted. * a) UDDI * b) TCP * c) SOAP * d) UDP**
- 8. Which of the following methods allow a remote object to be made available to a local client object? * a) share by value and share by reference. * b) transfer by value and transfer by reference. * c) copy by value and copy by reference. * d) marshal by value and marshal by reference.**
- 9. What does the adapter do? * a) allow multiple inheritance * b) create class * c) joins together types that were not designed to work with each other * d) combines different systems into one**
- 10. The Gang of Four (GOF) patterns encompass a design pattern space that consists of different design patterns categorized into** * Answer: Creational, Structural, Behavioral

11. What is the purpose of the Facade pattern? * **Answer:** To simplify the use of the required subsystem.

12. What is the main goal of socket programming? * a) to learn how to build a single server application. * **b) to learn how to build client/server applications that communicate using sockets.** * c) to design an operating system. * d) to create a graphical user interface.

13. The command will execute a stored procedure in the data source. * a) CommandType.Text * b) CommandType.TableDirect * **c) CommandType.StoredProcedure**

14. What is the purpose of the Asynchronously delegate Asynchronous operation? * **1. To represent a method called when an asynchronous operation completes.** * 2. To close files after reading. * 3. To directly read from the files. * 4. To handle synchronous file operations.

15. Which of the following is not true about Decorator? * **c) All decorators must be applied in a specific order.**

16. The Socket class supports asynchronous methods, not synchronously. * *(This appears to be a statement rather than a question with options)*

17. What is a key requirement for packets that travel on the internet? * *(No answer provided in the image)*

18. SendBuffer size Gets or sets the size of the send buffer. Returns Bool. * **True** * False

19. What of the following is not true about delegate? * **a) multicast delegate must contain only methods that return non-void.**

20. You need to create a system where multiple algorithms can be swapped. * 1. proxy * 2. adapter * **3. strategy** * 4. state

21. Events are primarily used for single user actions such as button clicks or menu selections. * **a) True** * b) False

22. What of the following is not a parameter of FileStream.BeginRead()? * a) buffer * **b) Current** * c) count * d) callback

Additional Identified Concepts:

- **Purpose of Context Class (in State and Strategy):** To maintain an instance of state or strategy.
- **Class for Controlled Access (e.g., to a remote server):** Proxy.
- **Purpose of using thread in Synchronous streams:** *(Question is incomplete in the image).*
